Nagoya University, Japan

It is a great pleasure for me to participate in the NOWPAP/PICES/WESTPAC Joint Training course on Remote Sensing Data Analysis and I appreciate having had this opportunity. My purpose to attend this course was to understand how to estimate primary production with satellite remote sensing because I'm interested in the relationship between primary production and human activities in the coastal areas. In this course, I could learn the importance of primary production and a basic knowledge of primary production and know the recent researches about primary production with satellite remote sensing. They were very useful for my study and they helped me to deepen my knowledge. The most important thing was that I could make a lot of international friends. We helped one another to catch up with the class and discussed not only the class subjects but also the culture of each country. I hope I would like to see them again. Finally, I would like to say 'thank you' to all trainees, teachers, organizers and staff of this course.
