

NOWPAP – PICES Joint Training Course on Remote Sensing Data Analysis

Peng LIU

(China National Environmental Monitoring Center, Beijing, China)

NOWPAP - PICES Joint Training Course was organized from October 21-25, 2013, at Ocean University of China (Qingdao, PR China), and included lectures by experts and hands-on tutorial sessions on analysis of satellite data. This was a lively and interesting course for me.

The training course was very useful. I am working in the fields of marine sciences and coastal-zone management at China National Environmental Monitoring Center (CNEMC). In my daily, my major work is to check satellite images to find marine pollution, such as red tide and oil spill. Fortunately, through the course, I got useful skills and knowledge to utilize remote sensing data for monitoring and assessing the coastal and marine environment.

As the participants, we asked many interesting questions and the experts answered us patiently. It is not only a source of pleasure but also an opportunity to discuss some important problems.

I'd like to thank the staff's kindness. They arranged accommodations and transportation. The training course was held in Ocean University of China. It was a beautiful campus and it was pleasant to visit there.

At last but not the least is that. I hope the friendship between our countries will be further developed. Let's hope we'll meet again in the future.
